CHAPTER 10

CORRECTION/CHANGE OF STORAGE ITEM RECORDS

A.   GENERAL

     This chapter provides standard procedures required by ICPs to provide for the correction and/or updating of storage activity records when:

     1.   Reported transactions indicate an inconsistency with ICP records.

     2.   A catalog/stock list change is processed against an ICP record which will affect stock control data maintained at storage activities.

B.   ITEM CORRECTION/CHANGE NOTIFICATION

     Storage Item Data Correction/Change Transaction, prepared in the alignment and format shown in appendix C53, is identified by DI Code DZB.  The code entered in record position 7 of this transaction serves to provide information as to the nature of the change, actions to be taken, and data field(s) affected by the change.  These codes are indicated in appendix B8.  Storage activities will use the Storage Item Data Correction/Change transaction to update stock records, item locator records, and bin tags.

C.   STORAGE ACTIVITY ACTION

     Storage activities will use the Storage Item Data Correction/ Change transactions to update stock records, item locator records, and bin tags.

D.   LOGISTIC REASSIGNMENTS (LR)

     1.   An LR Storage Information transaction, DI Code DZC, will be prepared to transfer quantities between ownership segments on the storage activity records as a result of LRs.  Alignment and format of DI Code DZC is shown in appendix C54.

     2.   Storage activities will use the LR Storage Information transaction to update stock records, item locator records, and bin tags.

     3.   An LR Storage Information Reply transaction, DI Code DZD, will be prepared by the storage activity within 5 working days to advise the LIM of the quantity transferred to the GIM ownership. Quantity available for transfer is subject to the retention quantity contained in record positions 76-80 of the DZC.  Alignment and format of the DZD is shown in appendix C55.

4. **If** the **LIM's** storage activity does not receive a DZC for an item being logistically reassigned, the **LIM's** storage activity will transmit a DZD, with A in record position 7, to the LIM for each balance, by condition code. The LIM will use the DZD to conduct research or to request a special inventory, as appropriate, to correct the accountable balances. The assets will be transferred as outlined in chapter **11.**
